

TECHNICAL NOTE

Express Scheiben Enteiser

Application area:

Is a special product for de-icing the car windows and wiper blades.

Description and features:

- thaws iced-up windows quickly and reliably.
- is based on renewable raw materials.
- does not attack stove enamels, plastics, glass, rubber, metals and anodized parts when used properly.
- protects against re-fogging

Application:

From a distance of about 20 cm, spray evenly and generously from top to bottom onto the icy windows and wiper blades. After a short exposure time, the ice coating will have thawed and the liquid residue can be removed using a rubber wiper or ice scraper. Before switching on the windscreen wipers, check that the wiper blades are no longer frozen. Subsequent sparing spraying with windshield de-icer prevents ice from forming again.

Warning:

Contact with skin and eyes should be avoided! In case of contact, rinse with plenty of clean water. Due to low flash point in undiluted state, keep away from sources of ignition and ensure adequate ventilation. Protect from heat and direct sunlight. Keep out of the reach of children!

Technical data:

Appearance: clear, colorless liquid
Smell: characteristic after alcohol
Density at 20 °C : 0,811 – 0,841 g/ml

Notice:

Please also observe the information on the container label and in the safety data sheet.
